	<p>VWR multiwell cell culture plates are available with a choice of surface treatments.</p> <p>Uniform well volume ensures an equal growth surface area Well surface is smooth and free from striation to maximize usable growth area Raised rims on wells with uniform rings on the lid to reduce evaporation Single-position lid reduces the risk of cross-contamination and handling mistakes Wells are labelled with alphanumeric code for easy identification Suitable for use with all common instruments and automation Sterilized by electron beam irradiation Free from DNase and RNase, and non pyrogenic</p> <p>Increased cell attachment surface treatment: This highly hydrophilic surface offers a significant advantage over the traditional cell culture surface. The surface treatment can improve cell spreading and attachment, and is suitable for cells that may adhere poorly due to cell phenotype, stressful culture conditions, or those which normally require additional biological coatings for attachment.</p>

	<p>VWR® cell slides are made from medical grade, high transparency PET, which has high strength and is unbreakable. Only the surface of the cell slide has a hydrophilic treatment so adherent cells grow easily, whilst the surrounding culture dish surface is hydrophobic, making it difficult for adherent cells to grow.</p> <p>Cell slide transparency and light transmittance are good so cells can be clearly observed under a light or fluorescence microscope The use of multiple cell slides in one dish makes it possible to develop multi-factor, multi-index, multi-level in vitro studies under the same condition Choice of Ø 8 or Ø 10 mm cell slides, with 12, 18, 32 or 45 cell slides per culture dish One cell culture can prepare multiple cell slides for different studies and objectives, increasing work efficiency Tab on the cell slide tilts at an angle, which is convenient for operators to directly clamp, and is engraved numerically, facilitating identification Free from DNase and RNase, non pyrogenic</p> <p>The integrated cell slides are fixed in the culture dish. If further test is necessary after cell culture, the cell slides can be taken out one by one and placed in a culture plate or other container with the necessary specifications.</p>

DURAN® Tamper Evident Screw Caps from PP, for laboratory bottles, with DIN thread

The tamper-evident screw caps are available with either a plug seal or a PTFE faced silicone cap liner (peroxide cured silicone). The integral coloured plastic ring tears when the cap is first opened, and is retained on the bottle neck. Therefore it can be clearly seen if the bottle has been opened after being first sealed. After the initial removal, both caps will still function as "normal" screw cap.

MEMBRANE Filter

CELLULOSE NITRATE

Cellulose Nitrate has the advantage of providing uniform pore structure over the wide range of pore sizes. The high non - specific adsorption of this membrane type makes it indispensable for many blotting procedures and diagnostic kits. Cellulose Nitrate assures effective retention with high flow rate. The printed grid eases the counting of bacterial colonies, micro colonies etc.
